

A PCA plot showing the relationship between PC1 (12.92% variance) on the x-axis and PC3 (7.74% variance) on the y-axis. The plot displays several distinct clusters of data points, each represented by a different color. The clusters are well-separated, indicating significant differences between the groups. The groups are: Green (top left), Blue (middle left), Purple (bottom left), Orange (center), Red (bottom center), Teal (bottom center), and Yellow (top right).

- *Alternaria brassicae*
- *Botrytis cinerea*
- Cauliflower mosaic virus (CaMV)
- Drought
- *Erysiphe cruciferarum*
- *Erysiphe cichoracearum*
- *Golovinomyces orontii*
- *Heterodera schachtii* 2
- *Hyaloperonospora arabidopsidis* 3
- *Meloidogyne javanica*
- *Plasmodiophora brassicae*
- *Plasmodiophora brassicae* 2
- Turnip mosaic virus (TuMV)
- Turnip mosaic virus (TuMV) 3
- Turnip yellows virus (TuYV)
